

CYVANT Website — Project Requirements Document (PRD)

Prepared for: Development team / freelancer or agency building or updating cyvant.org

Status: Draft — placeholder content marked clearly, to be replaced with final copy/assets before launch **Related documents:** Website UX & Trust Improvement Brief, Website & Email Automation Freelancer Brief

1. Purpose & Scope

This document defines the required sections, content, functionality, and data behavior of the CYVANT website. It is the reference for anyone building, editing, or auditing the site — covering both **what appears on the page** and **how the page behaves** (forms, CTAs, data flow, database structure).

Placeholder content is marked with `[PLACEHOLDER]` — these are illustrative and must be replaced with approved copy before launch, not shipped as-is.

2. Site Map

1. Home
2. About
3. Services
4. Courses
5. Testimonials
6. FAQ

All six sections should be reachable from the main navigation on every page, plus a persistent primary CTA (see Section 8).

3. Section Specifications

3.1 Home

Purpose: First impression, clear value proposition, single dominant path to conversion.

Content (placeholder):

- Hero headline: [PLACEHOLDER: "Understand breach before blame" – or approved replacement]
- Sub-headline: [PLACEHOLDER: one sentence on what CYVANT does – AI & cybersecurity education built for Africa, ready for the world]
- Primary CTA button: [PLACEHOLDER: "Start Your Journey" / "Explore Courses"]
- Starting price signal: [PLACEHOLDER: "Programs from ₦XX,XXX"]
- Brief "How it works" strip: [PLACEHOLDER: Learn → Practice → Build → Present → Defend → Portfolio → Opportunity]
- Verified outcomes strip (replaces old logo wall — see UX brief): [PLACEHOLDER: 2–3 real, verified graduate outcomes – name, role, company, with permission]
- Upcoming webinar banner: [PLACEHOLDER: next webinar title + date + register CTA]
- Secondary CTA: [PLACEHOLDER: "Talk to us" – smaller, subordinate to primary CTA]

Functional requirements:

- Hero CTA is the single highest-contrast action on the page
 - Verified outcomes strip must only display graduates/employers with confirmed permission on file — no unverifiable claims
 - Webinar banner is dynamic — pulls from the current active/next webinar without requiring a manual page rebuild
-

3.2 About

Purpose: Build trust and authority through founder/team credibility.

Content (placeholder):

- Mission statement: [PLACEHOLDER: 1–2 sentences]
- Founder bio: [PLACEHOLDER: Emmanuel Tavershima – background, credentials,

LinkedIn/GitHub links]

- **Team section:** [PLACEHOLDER: Content Creator / Digital Marketer / other team bios as appropriate – level of detail TBD by CEO]
- **Company story:** [PLACEHOLDER: why CYVANT exists, what gap it fills]
- **Values/what we are not:** [PLACEHOLDER: 3-5 brand values, pulled from brand positioning doc]

Functional requirements:

- Founder/team photos required (no generic stock imagery)
 - Links to real, active LinkedIn/GitHub profiles only
-

3.3 Services

Purpose: Clarify what CYVANT actually offers beyond courses (e.g. corporate training, consulting, partnerships) if applicable.

Content (placeholder):

- **Service 1:** [PLACEHOLDER: e.g. Corporate Cybersecurity Awareness Training – description]
- **Service 2:** [PLACEHOLDER: e.g. Custom Curriculum / Team Upskilling – description]
- **Service 3:** [PLACEHOLDER: e.g. Partnership / Speaking / Consulting – description]
- **CTA per service:** [PLACEHOLDER: "Request a quote" / "Talk to us"]

Functional requirements:

- Each service card links to either a dedicated inquiry form (see Section 6) or a pre-filled contact form indicating which service was selected, so leads arrive pre-segmented
-

3.4 Courses

Purpose: Present the full catalog while giving a first-time visitor a clear starting point (addresses the choice-overload issue flagged in the UX audit).

Content (placeholder):

- Academy 1 — Cybersecurity Academy: [PLACEHOLDER: track breakdown — Foundations / Professional / Engineering, or equivalent]
- Academy 2 — AI Academy: [PLACEHOLDER: track breakdown]
- “Start Here” flag: [PLACEHOLDER: 1-2 courses flagged as recommended entry point]
- Per-course card: title, level, duration, format, starting price, [PLACEHOLDER for each of the 9 courses]
- Optional: “Not sure where to start?” quiz/recommendation prompt

Functional requirements:

- At least one guided entry path must exist (flagged course(s) or a short recommendation flow) — the full catalog should never be the only way in
 - Each course card CTA leads to an embedded registration/inquiry form (not an external redirect — see Section 7)
 - Pricing must be visible at the card level, not hidden behind a click-through
-

3.5 Testimonials

Purpose: Social proof from real students — the primary trust-building lever for a young brand competing against established players.

Content (placeholder):

- Minimum 4–6 testimonials, each with: [PLACEHOLDER: photo, full name (permission on file), current role/company, specific outcome, quote]
- Priority: at least 1–2 testimonials from students who started with no tech background, matching the core audience

Functional requirements:

- No testimonial goes live without signed/written permission on file
 - Each testimonial should be independently verifiable if requested (per Student Success SOP verified-outcomes policy)
 - Display format: carousel or grid — should not require pagination to see at least 3 at a glance
-

3.6 FAQ

Purpose: Pre-empt objections and reduce pre-conversion anxiety.

Content (placeholder, expand from current):

- [PLACEHOLDER: Do I need a tech background?]
- [PLACEHOLDER: How much time does this require weekly?]
- [PLACEHOLDER: What certification/credential do I get?]
- [PLACEHOLDER: Is there career support after the program?]
- [PLACEHOLDER: What's the payment structure?]
- [PLACEHOLDER: How is this different from [competitor-style programs]?]

Functional requirements:

- Accordion-style expand/collapse, not a wall of open text
 - Include a fallback CTA at the bottom: [PLACEHOLDER: "Still have questions? Talk to us"]
-

4. Website-Wide Behavior

4.1 Navigation

- Persistent top navigation with all 6 sections
- Sticky or easily accessible primary CTA at all scroll depths
- Mobile: collapse to hamburger menu, primary CTA remains visible/accessible

4.2 CTA Hierarchy Rules

- **One primary CTA per page/section** (enrollment/registration-focused), visually dominant (color, size, placement)
 - **Secondary CTAs** (e.g. "Talk to us," WhatsApp contact) are visually subordinate — smaller, lower-contrast, positioned for users not yet ready to convert
 - No two CTAs of equal visual weight competing for the same action on one screen (see UX brief, Section 2.2)
-

5. Forms

All forms should be **embedded on-site**, not external redirects (e.g. no third-party Zoho form links) — see UX brief Section 2.6.

Form	Trigger	Fields	Destination
Webinar Registration	"Register" CTA on Home/webinar banner	Name, Email, Phone/WhatsApp, one qualifying question (e.g. "What's pulling you toward cyber/AI?")	CRM (see Section 7)
Course Inquiry	"Start Here" / course card CTA	Name, Email, Phone, Course of interest (pre-filled if from a specific card)	CRM, segmented by course/track
Discovery Call Booking	"Book a call" CTA	Name, Email, Phone, preferred time slot (via scheduling integration)	CRM + calendar system
Service Inquiry	Services page CTAs	Name, Email, Company (optional), Service of interest (pre-filled)	CRM, segmented as "Services lead"
General Contact	Footer / FAQ fallback CTA	Name, Email, Message	CRM, unsegmented inbox for manual triage

Form behavior requirements:

- Inline validation (required fields, valid email format) before submission
- Confirmation message or redirect on successful submission — no dead-end or unclear state
- Every submission fires a confirmation email to the submitter and a notification to the Digital Marketer
- No CAPTCHA or friction beyond what's needed to prevent spam/bots

6. Data Collection

What's collected and why:

Data Point	Collected Where	Purpose
Name, Email, Phone	All forms	Contact + CRM record creation
Course/Service interest	Course/Service forms	Segmentation, routing
Qualifying question response	Webinar registration	Lead scoring input
Engagement behavior (page visits, email opens, webinar attendance)	Site + CRM tracking	Lead scoring, segmentation

Requirements:

- A privacy notice/consent checkbox must appear on every form before submission, stating data will be used for CYVANT communications
- No data collected beyond what's declared and needed for the stated purpose
- Data storage and handling should comply with applicable Nigerian data protection requirements (NDPR)

7. Database / CRM Architecture

This section aligns with the separately scoped automation build (see Website & Email Automation Freelancer Brief) — the website's forms are the **input layer** for that system, not a standalone database.

Flow:

1. Form submission on the website → CRM record created/updated (via native integration or API, not manual export)
2. Lead is tagged by source (webinar / course inquiry / service inquiry / general contact) and by course/track interest where applicable
3. **Lead scoring** applied based on behavior: e.g. registered for webinar (+1), attended webinar (+2), booked discovery call (+3), no activity after 14 days (decay/flag for re-engagement)
4. **Segmentation** by: funnel stage (registrant / attendee / inquiry / enrolled), track interest

(Cybersecurity vs. AI), engagement level

5. Automated email sequences (reminder cadences, nurture sequences) trigger off these tags/scores, not manual sending

Requirements:

- Single source of truth: one CRM, not parallel spreadsheets and CRM records
 - No lead should exist only in a form submission inbox without a corresponding CRM record
 - CRM access and admin rights belong to CYVANT (Digital Marketer as primary owner), not the building freelancer/agency post-handoff
-

8. Acceptance Criteria

Before this is considered complete:

- All 6 sections live with approved (non-placeholder) content
- One clear primary CTA per page, secondary CTAs visually subordinate
- Courses section has a guided “start here” entry point
- 4–6 verified testimonials live, each with photo and permission on file
- Starting price visible on Home and Courses without requiring form submission
- All forms embedded on-site, none redirecting to external form tools
- Every form submission creates/updates a CRM record automatically
- Lead scoring and segmentation rules configured and tested
- Privacy/consent notice present on all forms
