

About:

Emmanuel Tavershima

Co-Founder & CEO, CYVANT

I'm building CYVANT around a simple belief: Africa doesn't lack talent; it lacks enough pathways that turn potential into opportunity. As Founder & CEO, I design practical learning systems that move people beyond consuming knowledge into building, solving, demonstrating, and becoming industry-ready. My work sits at the intersection of technology, education, and operations—building programmes, communities, and partnerships that turn learning into practical capability and real-world opportunity.

Our Story

CYVANT Enterprise Ltd was founded in Lagos, Nigeria, with a simple conviction: Africa has the talent to build and secure its digital future, but too many people lack the practical pathways to turn their potential into opportunity.

The idea grew from seeing a growing number of people pursue cybersecurity careers while struggling to bridge the gap between learning concepts and actually applying them. Too often, training ended with theory and certificates, leaving learners without the confidence, practical experience, or evidence of what they could do in real-world environments.

CYVANT was created to change that. We built a more hands-on approach to learning combining guided labs, simulations, projects, mentorship, and practical challenges that require learners to learn, build, solve, and demonstrate.

What began with cybersecurity has grown into a broader mission: building practical technology talent and the pathways that connect that talent to real opportunities. Today, CYVANT is building learning ecosystems, industry partnerships, and talent pipelines designed to help Africa's next generation become not just job-ready, but capable of creating and shaping the digital future.

Mission Statement:

Our mission is to develop job-ready cybersecurity professionals through hands-on learning, mentorship, and execution-focused education while contributing to the growth of Africa's digital workforce and cybersecurity resilience.

FAQS.

Do I need a tech background to join?

Not necessarily. Our programmes are designed for different starting points, from beginners building their foundations to professionals looking to deepen their skills. Each programme clearly states the recommended entry level.

How much time does this require weekly?

It depends on the programme. Expect a combination of live sessions, practical labs, projects, and independent practice. We design our programmes to require consistent participation, not just attendance.

What certificates or credentials do I get?

This depends on the programme. You may receive a CYVANT certificate of completion, while certification-focused programmes can prepare you for recognized industry certifications such as CompTIA. External certification exams are subject to their respective requirements and fees.

Is there career support after the programme?

Yes. Career support can include mentorship, CV and LinkedIn guidance, portfolio development, interview preparation, industry exposure, and access to relevant opportunities. For eligible learners, CYVANT also works toward connecting trained talent with internship and industry opportunities.

What's the payment structure?

Payment depends on the programme. We offer full-payment and, where available, installment options. The specific payment structure is provided on each programme page before enrollment.

How is CYVANT different from self-study or other platforms?

You don't just consume content, you put it to work. CYVANT combines structured learning with practical labs, projects, mentorship, peer learning, assessments, and opportunities to demonstrate what you've built. The goal is not simply to finish a course, but to leave with skills you can demonstrate and apply.
